

# CGU VPN Connection Guide

## Installing VPN Client

1. In any browser you like navigate to <https://vpn.claremont.edu>
2. Once there, you will see a window like the one below. Select the Group dropdown menu and select the group you have been assigned to and then select "Login".

The screenshot shows a 'Login' window with a key icon in the top left corner. The text 'Please enter your username and password.' is centered. Below this, there are three labels: 'GROUP:', 'USERNAME:', and 'PASSWORD:'. The 'GROUP:' label is followed by a dropdown menu with the text '---SELECT-CAMPUS---'. The 'USERNAME:' and 'PASSWORD:' labels are followed by a dropdown menu with the text '---SELECT-CAMPUS---'. The dropdown menu is open, showing a list of options: 'CGU General / WFH', 'CGU Information Technology', 'CGU Restricted', 'Dept of Natural Sciences', 'HMC', and 'KGI'. The first three options are highlighted in yellow.

3. You should now be directed to a Microsoft Login window where you will enter in your student email address, password and satisfy MFA.
4. Once authenticated you will be directed to a page to download the software. Please select the download button and then run the executable after it finishes.

cisco **SECURE**  
Secure Client

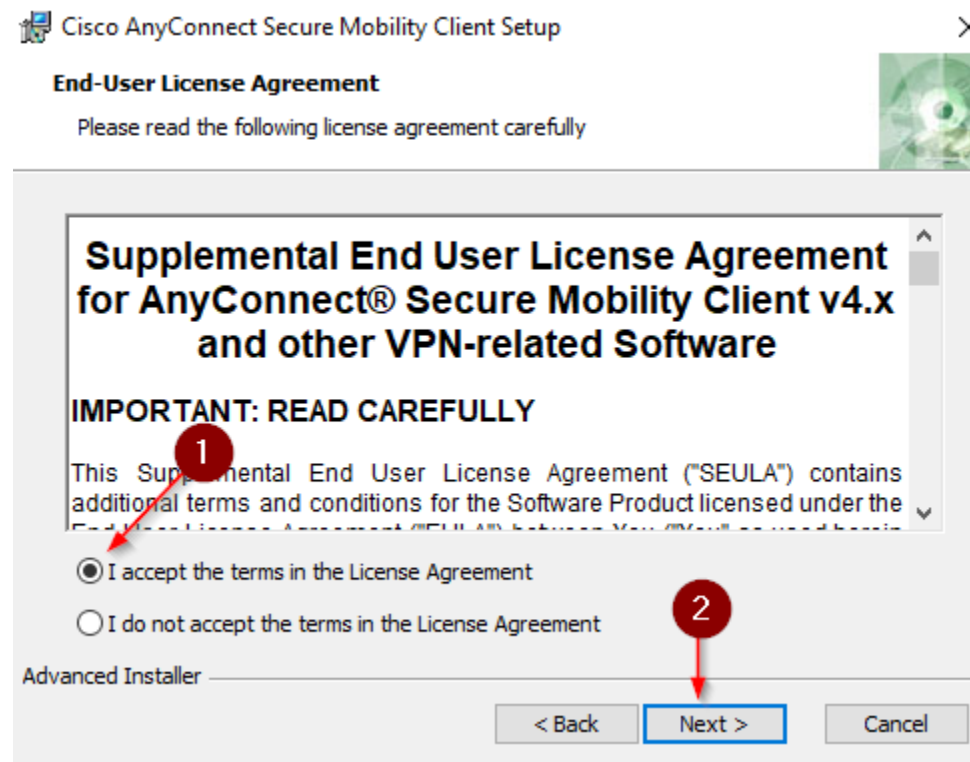

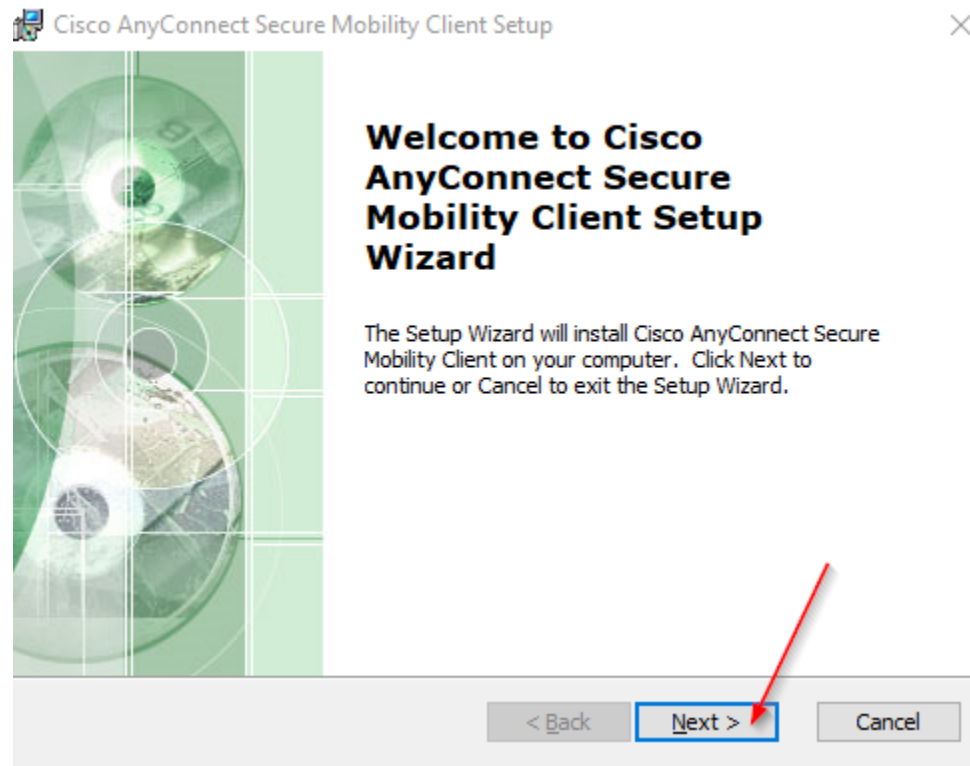

## Download & Install

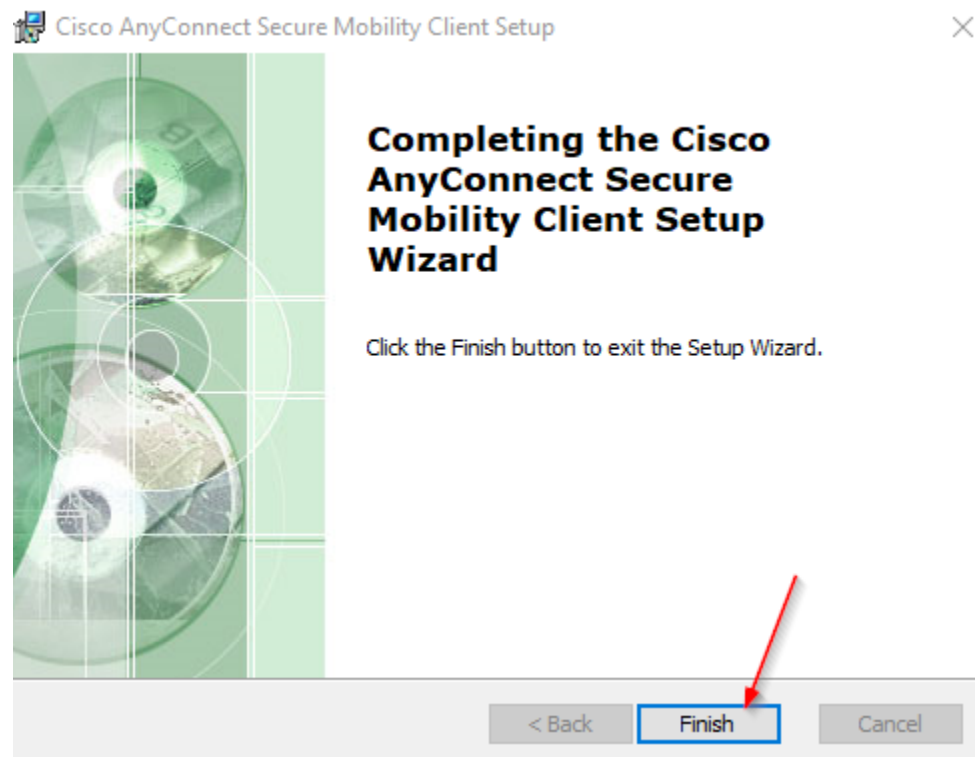

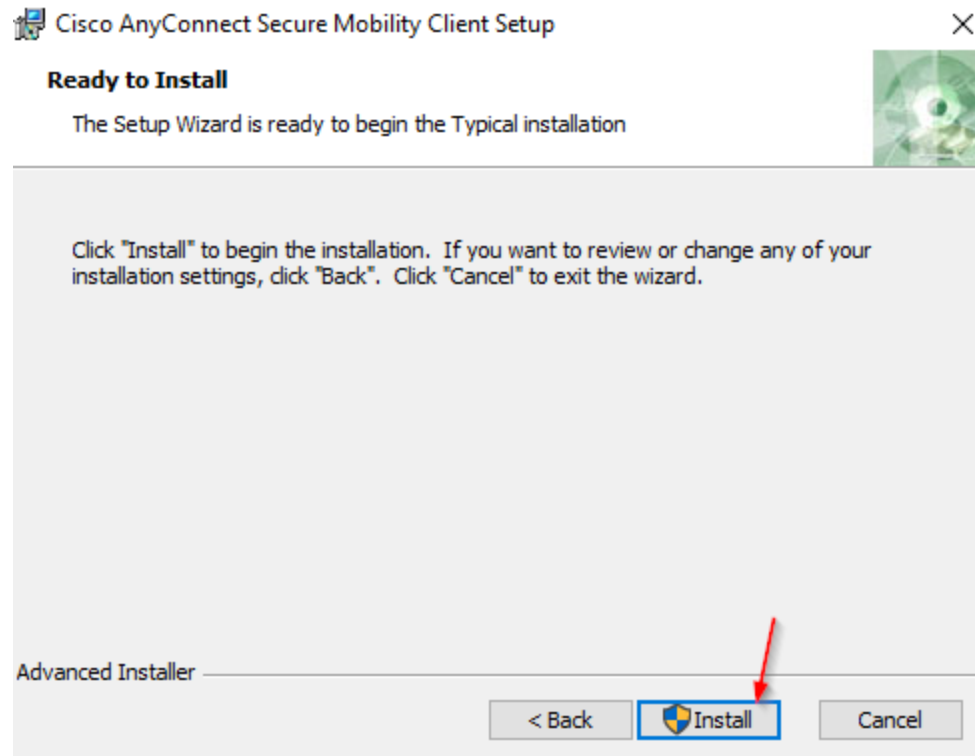

Download Cisco Secure Client and install it on your computer.

Download for Windows

+ Instructions

5. Run the installer that was downloaded and install with default options.

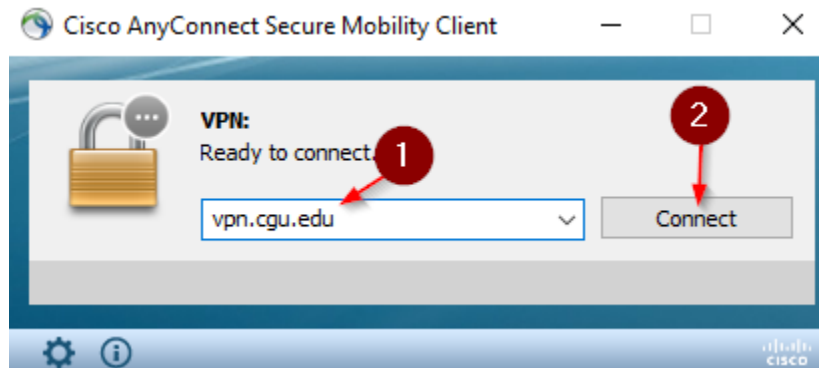

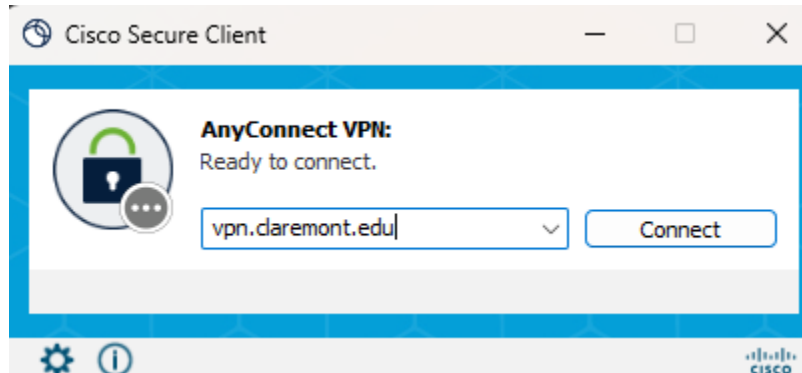

## Connecting to the VPN

1. Launch Cisco AnyConnect/Cisco Secure Client and enter **vpn.claremont.edu** under the dialogue box and then click Connect. **IMPORTANT: vpn.cgu.edu is the OLD appliance and will no longer work in the future**

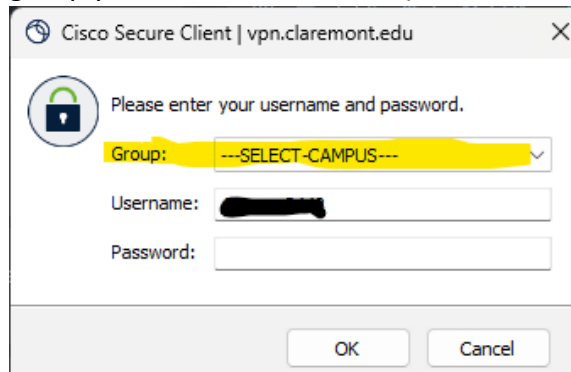

### OLD CISCO ANYCONNECT CLIENT

### NEW CISCO SECURE CLIENT

2. Once it connects you should see a window with three sections. Don't enter any information here yet. Instead, select the drop down next to "Group" and select the group you want to connect to (CGU WFH/General, CGU OIT, CGU Restricted).

3. After selecting the profile a new window will come up with a normal Microsoft login. Please enter your email address and password then satisfy your MFA Prompt.
4. After authenticating with Microsoft the client will connect but if you are connecting for the first time it might start an upgrade of the client. The upgrade should only take a minute or two but there are some important things to note:
  - The new client will upgrade to version 5 which will have a new name which is “Cisco Secure Client” and have a new logo as shown below
5. To disconnect from the VPN right click on the icon in the tray and then click Disconnect.

- This upgrade will remove any shortcuts you once previously had to “Cisco Anyconnect” so you will need to recreate these shortcuts.
- The app will prompt for a reboot, but you can cancel the reboot and do it at a later time.
